

## ILLIG NetService

ILLIG NetService can be used worldwide with existing Internet access. It is not limited to the control (PLC-S7) or Siemens - Simatic devices, but also allows access to all components which can be accessed via the ethernet-based machine network.

After the installation of ILLIG NetService, you can set up the VPN tunnel to the ILLIG service by pushing the button. The VPN tunnel is the protected data channel via Internet which allows communication between the machine and the ILLIG service.

### Your benefits

- | Cost reduction in the elimination of failures
- | Lowering the installations on site
- | Improved trouble shooting
- | Shortening downtime by means of fast service support in case of failures
- | Additional functions are enabled, e.g. Software adaptation and software updates or ILLIG diagnosis report

### Available for machines

All machine types with S7 PLC and newer
